Accessibility Assessment — Initial Meeting

BlueTread · Discovery & scoping session

Client: _____
Date: _____

Agenda (45–60 min)

1. Introductions	2. Current state	3. Scope	4. Access	5. Next steps
Goals & stakeholders	Requirements, history, risk	Platforms, pages, key flows	Environments, accounts, code	Timeline & deliverables

Current state

1. Is your application / customer portal publicly accessible?
2. Does your organization have accessibility requirements today?
3. Which conformance level are you targeting?
   ☐ WCAG A ☐ AA ☐ AAA ☐ Not sure
   Which version? ☐ 2.1 ☐ 2.2 ☐ Not sure
4. Have you completed an accessibility audit before? If so, when, by whom, and what has been fixed since?
5. Have you ever received:
   ☐ Complaints ☐ Demand letters ☐ Legal inquiries
   ☐ Procurement requests (VPAT / ACR)
6. Is there an active matter, deadline, or legal counsel involved?
7. What is your team's current accessibility knowledge?

Drivers & regulations

8. Which markets do you serve? ☐ US private
   ☐ Government / public ☐ Federal (508) ☐ EU (EAA)
9. Is a date driving this (contract, RFP, launch, legal deadline)?

Users & team

10. Do you know of users who rely on assistive technology?
11. Which browsers, devices, and OS versions do you support?
12. Who will remediate issues: in-house team, agency, or vendor?
13. Is accessibility part of your design process / design system?

Notes / action items

Scope

14. Platforms in scope: ☐ Web ☐ iOS ☐ Android
    Mobile stack: ☐ React Native ☐ Native ☐ Flutter
    ☐ Other
15. Approximately how many pages / screens?
16. What are your 3–5 most critical user journeys (e.g., sign-up, login, checkout, payments, account settings)?
17. Do you have a sitemap.xml we can use for discovery?
18. Anything out of scope (third-party widgets, embedded payments, PDFs, video, marketing site)?

Access & environments

19. Is the portal behind a login? Can you provide test accounts for each user role?
20. Is a staging / QA environment available for testing?
21. Will bot protection, CAPTCHA, MFA, or rate limiting block automated scans? Can our IP be allowlisted?
22. Can we get read access to the code repository? Which frontend framework do you use?
23. Which issue tracker do you use (e.g., Jira)? Can we file tickets directly?

Deliverables & next steps

24. Who is the audience for the report (executive, legal, engineering, procurement)?
25. Interested in remediation support or ongoing monitoring beyond the assessment?
26. Who is the primary contact, and how should critical findings be shared?

> **What to expect:** Our assessment combines automated scanning (axe, Lighthouse) with manual keyboard and screen-reader testing, because automated tools catch only about a third of WCAG issues. You'll receive prioritized findings mapped to WCAG success criteria, an executive summary, and remediation estimates. A typical medium-size web assessment takes 20–35 hours.
